

ASLE Soil Testing Services

ASLE provides soil testing services through accredited labs in the country. Soil samples are instruments of planning, strategy, and technical analysis for your crop production in the field.

Top Results

- Identifies production issues within your field
- Allows for crop-specific fertility recommendations and application
- Promotes bigger yields by ensuring the right nutrient mix
- Determines the effectiveness of treatments, protocols, and products

Smart Investment

- Maximizes the ROI on your fertilizer dollar
- Enables you to calculate the right amount of nutrients to apply based on yield targets and economic goals
- Identifies the soil characteristics and base nutrients available for new or rented land
- Allows for the capture of seasonal fertilizer prices based on your overall plan

Sustainability

- Provides the flexibility for a short term or long-term fertility approach based on the results
- Reduces over or under fertilization
- Enhances soil management and reduces soil degradation
- Contributes to plans targeting uniform crop maturity

To book your soil sampling today, contact your local ASLE Agronomist/Product Advisor or one of our ASLE Offices
